Course Description: This course explores the relationship between politics and place. We consider how political institutions such as the federal system shape regional economic and political development. In turn, we consider how different patterns of regional economic development shape national, state and local politics. We first turn to defining what is meant by federalism and regionalism, and the relationship between these two concepts. We then turn to a brief historical overview of regionalism and public policy from 1789 to 1930. Next, we consider different stages of regional public policy starting with nationally directed regional policy and politics (1930 to 1970). During this era we focus on Appalachia, the rise of the “Sunbelt” and the emergence of the “New South.” We then examine the era of competitive regionalism (1970 to present), We especially focus on the growth of metropolitan areas, especially the rise of high tech regions accompanied by the growing poverty of central cities.

Course Requirements: Class attendance is required. Students will participate in three (3) in-class exercises. Other requirements: Mid-term, Final Exam.
